

# AS2410 - Portable Incident Recorder

Compact Portable Unit

Mains or Battery Powered

All features Icon driven

## Description

The AS2410 Portable Incident Recorder is a compact units which can be quickly and easily deployed to provide communications and storage of audio to a selection of different circuit types. The audio is recorded in an IP format and stored digitally for excellent reproduction of the audio files. The audio clips are held in a database on the PC which allows all files to be listed in date order with start and stop times and also other relevant negotiator data being appended to them. When a recording is in progress the audio can be spooled to a Live Listen group locally through wired headsets, speakers or even secure Bluetooth headsets. In addition to the local listen, remote parties can also be introduced into a listen only facility. This remote Live Listen can be via Airwaves, GSM or PSTN.
